Ahmed Abdelhady Ali

Job Title: AI Business Solutions specialist at Microsoft.

Address: Cairo, Egypt

Mobile: +201002630343

Email: proghady@gmail.com

Career Objectives

Senior Technical Consultant with 17+ years of experience in software development, cloud transformation, and enterprise solution delivery with a proven track record in enabling organizations—particularly in the education sector—to adopt Microsoft cloud and AI technologies, including Copilot, to enhance productivity and digital innovation.
Proven ability to translate business needs into scalable technical solutions, influence decision-makers, and lead large transformation initiatives.
Looking to drive AI adoption and modern workplace transformation into a forward-thinking organization by delivering scalable, value-driven solutions.

Personal Information

Date of Birth: 27/9/1986.
Nationality: Egyptian
Military Service: Served
Marital Status: Married

Education

- **B.Sc. of Computer Science, Mansoura University -Egypt - May 2007**
- **Microsoft 365 fundamentals certified.**
- **Microsoft Azure AI fundamentals certified.**
- **Microsoft Power Platform fundamentals certified.**
- **MCTS SharePoint 2010 application development certified.**

Technical Skill

AI & Copilot Solutions
Microsoft 365 Copilot, Copilot Studio (Agent Development, Skills Design, Orchestration), Model Context Protocol (MCP) integrations for AI agents and enterprise data connectivity

Power Platform
Power Automate (Cloud Flows, Process Automation), Power BI, Dataverse, Custom Connectors, Low-code Solution Development

Microsoft 365 & Modern Workplace
Microsoft 365 (Exchange Online, SharePoint Online, Teams), Microsoft Viva Suite, Modern Workplace Transformation, Digital Workplace Enablement

Identity & Security
Microsoft Entra ID (Azure AD), Identity & Access Management (IAM), Conditional Access, Zero Trust Architecture, Governance & Compliance

Device Management & Endpoint
Microsoft Endpoint Manager (Intune), Endpoint Security Policies, Mobile Device Management (MDM/MAM), Windows Autopilot, Modern Desktop Deployment (Windows 10/11)

Development & Automation
Microsoft Graph API, REST API integrations, PowerShell scripting & automation, Workflow automation and system integration

Cloud & Integration

Azure Active Directory (Entra ID), Microsoft Cloud Architecture, API integrations, Enterprise system connectivity

Low Code Platforms

Power platform, K2 five, Ultimus, Nintex

Modeling

UML.
DFD.
ER-Diagrams.

Programming

Object oriented programming.
N-Tier architecture
Design Patterns
SharePoint 2010,2013,2016,2019, SP Online
Asp classic, C#, ASP.Net, MVC, ADO.Net, LINQ, Entity Framework, HTML, Java Script, jQuery, AngularJS, Angular, VB script, Ajax, TELERIK Controls.
Rest APIs, Swagger

DB

SQL server 2000, 2005, 2008,2012,2014,2016,2019, Azure SQL
Microsoft Access,
MS SQL Server Integration Services "ETL packages"

Reporting

SQL server reporting services.
Crystal Reports.

Tools

Windows Azure
Microsoft Visual Studio & VS Code
Visual Source Safe, Team Foundation Server.
SVN Tortoise, Jira, Trello
Microsoft Office Family.
Basecamp, Bug net
Virtualization (Hyper-V, VMware)

Familiar With

C/C++.
CSS, XML.

Work Experience

AI Business Solutions Specialist for MEA

Company: Microsoft.
Duration: Dec 2020 till June 2026

Role:

- **Drive digital transformation initiatives for higher education customers across the MEA region by designing and executing multi-year cloud and AI adoption strategies.**
- **Partner with strategic customers and stakeholders to define modern workplace and AI transformation roadmaps, aligning Microsoft 365, Copilot, and cloud technologies with business and learning outcomes.**
- **Lead customer engagements to accelerate adoption of Microsoft cloud solutions, influencing technical and business decision-makers to drive successful deployment and measurable impact.**
- **Architect and deliver end-to-end solutions leveraging Microsoft 365, Azure, Power Platform, and Copilot technologies to modernize education environments and enhance productivity.**
- **Champion AI and innovation by introducing cutting-edge use cases (Copilot, AI agents, automation) to transform teaching, learning, and operational processes.**
- **Orchestrate cross-functional teams including Microsoft sales, partners, and SMEs to deliver integrated solutions and ensure successful execution of strategic initiatives.**
- **Lead Modern Classroom and digital transformation workshops, enabling customers to adopt secure, scalable, and cloud-ready environments.**
- **Collaborate with partner ecosystems to design, pilot, and scale Microsoft solutions across education institutions.**
- **Remove technical, competitive, and security blockers to accelerate adoption and drive customer success.**
- **Provide strategic insights and field feedback to Microsoft global teams to influence product development and industry solutions**

  Measure recruitment agencies Processes performance and compare to other agencies performance by getting feedback from all participants (job seeker, agency, company, consultants) using survey tool.

- **CRMP (http://crmp.dk/)**
  Serve car industry and is often used by independent car repair shops, connects customer data, technical data, and wholesalers, and integrate with financial service provider "https://www.e-conomic.com". In the course of work, mechanics can easily access relevant information about customer/car, history, technical data, booking calendar and spare part purchases. In addition, this information can be imported directly to the work ticket.

- **CleanDesk**
  CleanDesk offers dedicated financial responsibility for your business.
  I was responsible for building an integration module between CleanDesk and "https://www.e-conomic.com" to synch customers, products, invoices... using rest API

Lead Software Engineer

Company: ITWORX – Free zone, Nasr city, Egypt.
Duration: April 2014 to FEB 2015

Role:

- **Determine design strategies and methods for developed modules.**
- **Understand and verify functional requirements of applications.**
- **Determine security and performance requirements of systems.**
- **Determine and find solutions for the key design issues, for instance, concurrency control and handling of events, distribution of components, error and exception handling and fault tolerance, interaction and presentation, and data persistence.**
- **Plan for the construction of developed modules and applications**
- **Responsible for activities like coding using software building tools, unit testing, integration with other software modules, root cause analysis, debugging Code, bug fixing, and process measurements.**
- **Ensure applications design and construction artifacts are stored correctly in configuration databases.**
- **Provide guidance/mentorship on programming practices and techniques to individuals and cross-functional teams.**
- **Prepare software packages to be delivered to clients.**

Projects:

- **PM calls report inquiry (Reliance)**
  Reliance is a conditioning company in Canada, the maintenance department makes periodical calls to customers to arrange appointments for periodical maintenance, customers who will be contacted were extracted manually, the new tool (PM calls report inquiry) should extract customers according to changeable criteria, the system was designed as a query builder and each time you run this query you can export the results into CSV format to be a source for another automated calling system.

- **UTC social media Access.**

  The solution proposed by the Training department. After employees finish some training courses, they could get access to social media sites (Facebook, YouTube, twitter …) and this access is granted by adding users to active directory and LDAP groups. Training data are moved from oracle DB to SQL server DB using ETL then users are asked to provide some information from a web-based application then the ETL will complete to grant access for users.

- **UTC Common Data Repository & EBX Systems Integration**
  An integration service between CDR and EBX systems to synch CDR database with EBX database using Microsoft SQL server integration services "ETL package".

- **UTC Common Data Repository & Bank Accounts Registry Integration**
  An integration service between CDR and BAR systems to synch CDR database with BAR database new fields related to "FATCA- new Taxes in USA" using Microsoft SQL server integration services "ETL package".

Senior Software Engineer

Company: ITWORX – Free zone, Nasr city, Egypt.
Duration: Nov 2012 to March 2014

Role:

- **Develop project documents, project risks, and change requests estimate.**
- **Assure assigned and developed modules quality and unit testing activities are executed.**
- **Manage project code development and its adherence to project design.**
- **Handle project-related technical issues; support and troubleshooting.**
- **Developing ASP.Net / SharePoint applications.**
- **DB Design and Implementation.**
- **Application deployment and writing deployment guides.**

Projects:

- **Results reporting system for African Development Bank.**

  Results Reporting System (RRS) is a solution proposed by Quality Assurance and Results department in ADB Tunisia. The system is to meet the need for a Web-based method for field force (mainly Task Managers) to report projects' statuses and progress; generate and publish reports; track and generate performance and statistical reports on the project portfolio, fund and grants managed by the bank. The reports generated will include standard ADB reports. Additionally, RRS will allow the analysis of outcomes and outputs through using indicators to track progress towards achieving stated targets. On the other hand, RRS will give ADB an insight into fund allocation through periodic tracking of the performance of the Core Sector Indicators which may enable stakeholders to take corrective preventive actions.

- **Ministry of Health Mobile Application (UAE)**
  The application offers three main services:
  1. **Vaccinations: parents can create accounts and add their child, and they will be email /notifications remaindered for the due date of their child vaccinations**
  2. **Medicine pricing / alternatives: offer fast search in medicines and get its prices and alternatives.**
  3. **Medical centers: display all medical centers in the UAE.**

  The application is bilingual and supports IOS, Android, Black Berry, and Windows 8.

- **UTC BAR (Bank Accounts Registry)**

  BAR is web-based application which deal with all UTC business units and reporting entities gathering and validating UTC bank transactions data, credit facilities, long term debits, Capital Lease, parent guarantees, with reporting tool and e-banking services.
- **UTC Common Data Repository (CDR)**
  An integration system between BAR and CDR projects to place the common tables in both projects in a unified place. This helps users handle insertion, update, and deletion process in one place rather than applying them on both databases.

- **UTC SWIFT Integration Service**
  SWIFT is an integration service that integrates data from Global data files for banks all over the world and copies this data in CDR and BAR databases.

- **Migration of Results reporting system for African Development Bank (Onsite).**

  Results Reporting System (RRS) is a solution proposed by Quality Assurance and Results department in ADB Tunisia.in this phase the system is migrated from SharePoint 2010 to 2013 environment and integrated with another operations portal to use the same database and a web services layer was built over RRS business layer to support building mobile apps in the future.

Senior Software Developer

Company: ORCTECH – 48 Giza st. Dokki 12311, Egypt.
Duration: DEC 2010 until Nov 2012

Role:

- **INCAPTIVA Denmark offshore Team**
- **Developing Web / desktop Applications**
- **DB Design and Implementation**
- **Writing Queries, Stored Procedures, and functions**
- **SharePoint customization**

Projects:

- **Nordic print planner: a generic System that manages magazines specification "paper, format ... "and plan printing then compare planned time and actual after integrating with existing systems.**

  The core of the system depends on generic fields, each magazine have a parent type that is associated with some generic fields definitions, creating a magazine will inherit fields from parent magazine and it is rendered in runtime and only fields with values are stored in the DB, also it support multi country and multi-language , also contain a budget planning that support multi-currency and draw the estimated time –calculated from sub tasks deadlines- for task on a RAD scheduler to compare with actual time from external system , also a notification system that send mail when a predefined field - per user- has changed.
  Support multiuser access to predefined parent magazines and defined rules in the DB.
  Print magazine report of the basic details and its related sub magazines.
  Generate magazines for a parent magazine for a coming date.
  Support holidays and vacation that affect deadlines while calculations.

- **TUC: reservation system and scheduling for a Car driving learning company.**
- **InfoPath Forms: replaced with asp.net pages send xml strings and save as html files.**
- **INTRABOX: display data from Custom SharePoint lists into TELERIK charts with generic Axis's into SharePoint web parts.**
- **INCAPTIVA Egypt Recruitment DB: CVs repository implemented with custom SharePoint document Library, custom content type, custom site columns and event receivers.**
- **ORCHTECH Code Generator: code generation tool built as a desktop application and was divided into two applications 1- Data Dictionary: Describe application structure and settings 2- Template Builder: Uses xml templates to generate applications to a specific platform.**
-

Junior Software Developer

Company: Arabic Center for Information - the 7th Area, Nasr City, Egypt.
Duration: March 2009 –DEC 2010

Role:

- **Developing Desktop and Web Applications**
- **DB Design and Implementation**
- **Writing Queries, Stored Procedures, and functions**
- **Developing Reports using SQL Server Reporting Service 2005.**
- **Customer visits (gathering requirements, Deploying applications onsite, onsite modifications)**

Projects:

- **CUBE: an ERB System that manages Human Resources, Training, Time Control, custom search, Reporter.**
